

PLATFORM ENGINEERING / IN MOTION

From commit to confidence.

Don't just describe the delivery path.
Let people follow it.

Markdown

SVG

JavaScript

AN INTERACTIVE MARP EXPERIMENT

Use the arrow keys to explore

Build once. Earn the right to ship.

The platform turns a change into evidence, then into a release.

01

CREATE

One immutable artifact.

Compile once. Sign the result. Keep the same identity across environments.

source ————— image

02

VERIFY

Independent evidence.

Run tests and security checks in parallel. Both must pass before promotion.

tests ————— policy

03

PROMOTE

A deliberate release.

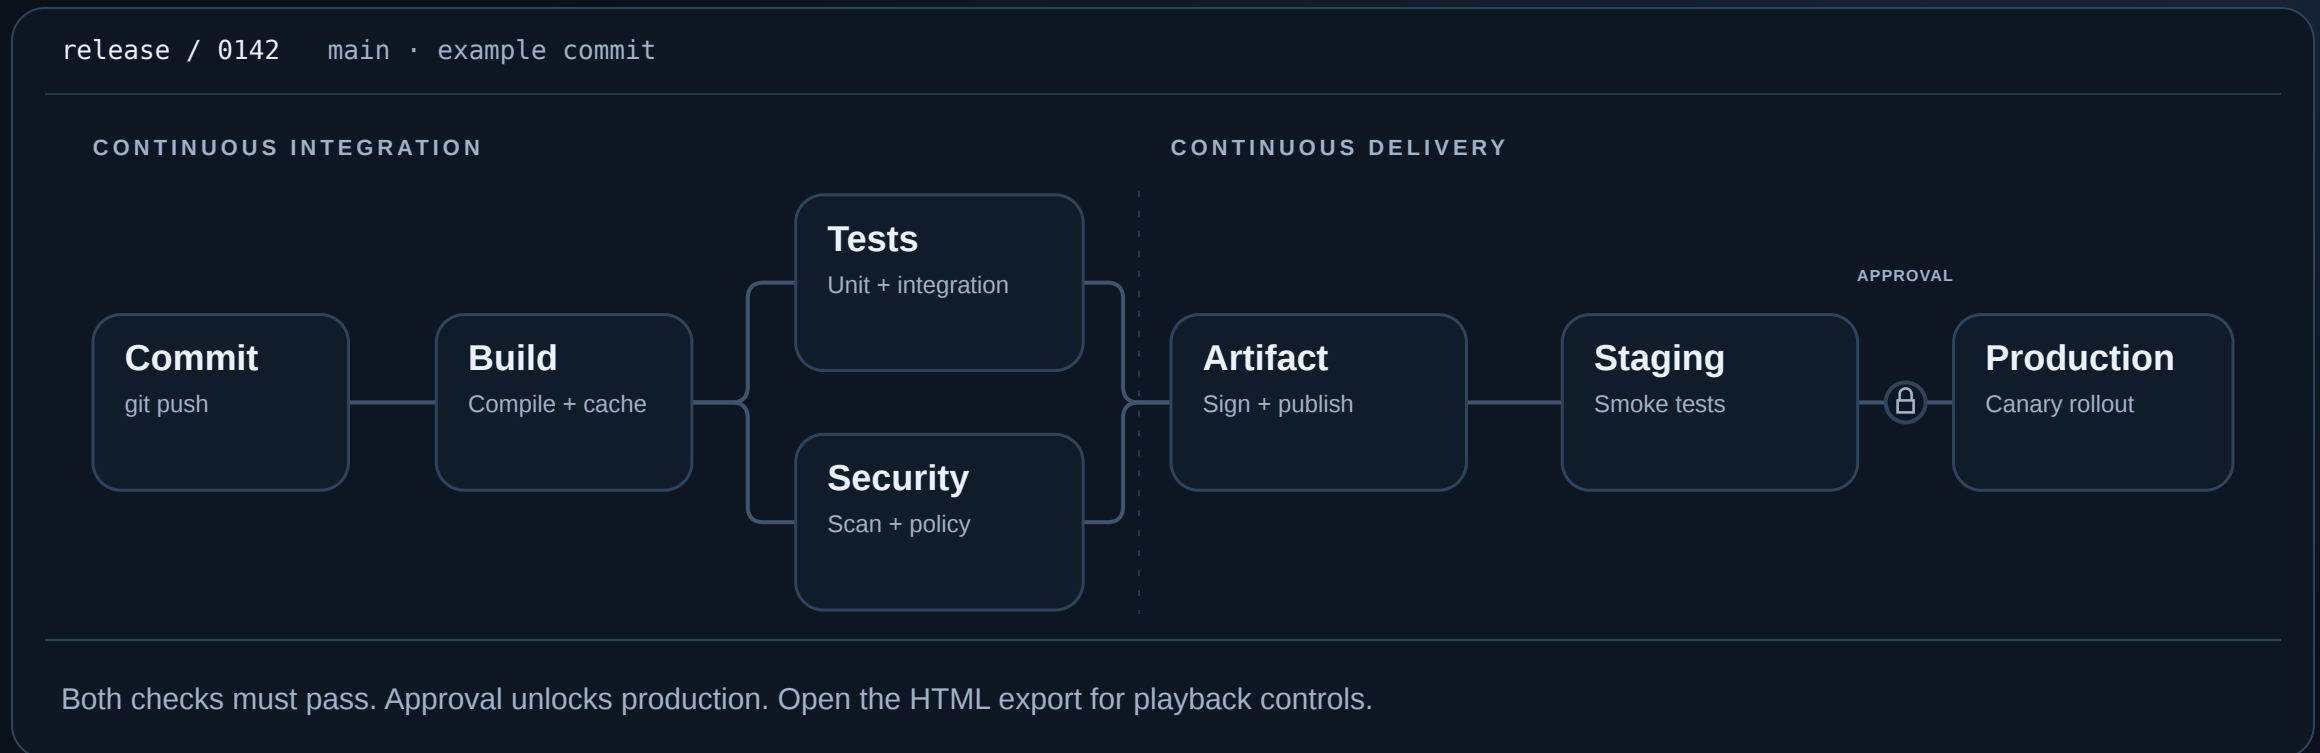

Validate in staging. Approve the gate. Increase production traffic gradually.

staging ————— production

THE KEY IDEA Promotion moves the artifact, not a new build.

Watch the platform work.

Parallel checks. A human gate. A progressive release.

Motion is a layer, not the format.

Markdown tells the story.

Keep stages and decisions visible.
Move detail into speaker notes.

JavaScript drives the timeline.

JavaScript moves SVG signals
and updates stage state.

Keep a static fallback.

Even without JavaScript,
the delivery path stays readable.

THREE EDITABLE LAYERS

Animated-CICD.md
narrative + SVG + speaker notes

themes/animated-cicd.css
color tokens + layout + motion

assets/animated-cicd.js
stages + timing + interaction

Local code. Browser-native playback.
